

eRTMAC-NWIS Synthetic Drilling Report

Well Completion Report — Well W106

Field: Demo North Field
Location: Synthetic Block A
Well ID: W106
Total Depth: 3220 m
Primary Formation: Barail Formation

Drilling Parameters

Parameter	Recorded value
Final Depth	3220 m
Casing Depth	2700 m
Casing Size	13 3/8 in
Cement Top	1980 m
Formation	Barail Formation
Well Status	Completed

Historical Drilling Events

- Casing was set at 2700 m MD with a synthetic 13 3/8 inch casing string.
- A cementing operation was completed with a reported top of cement at 1980 m MD.
- A pressure test was conducted after the cementing operation with no synthetic failure recorded.
- Historical review identified the 2580–2650 m interval as a nearby interval with drilling-event observations in W105.

Operational Conclusions

- W106 provides completion context for the same synthetic field and formation.
- The report cross-references the 2580–2650 m interval as a historical knowledge zone based on W105.

Prototype notice: This synthetic report is created only for testing the NWIS RAG pipeline. It is not an actual Oil India Limited operational record and must not be used for real drilling decisions.
